

RDS-Tools Product Line

"Must-have" Tools for RDS Administrators

Straightforward solutions to enhance Remote Desktop Services

RDS-WebAccess

Remote Desktop Web Portal
based on HTML5 RDP client.

Just use your browser to start a RDS session.

RDS-Knight

Your RDS servers are under threats.
Prevent cyber-criminals to destroy your data.
Secure users profiles.

Server Genius

Monitor your RDS servers, create alarms and
manage your users' activity with graphical
production reports.

Simple and Powerful Tools for RDS and TS Servers

In today's connected world, it becomes mandatory to possess the right tools to enhance the ease of access and the security of your servers. Solutions to extend their possibilities are also at hand.

With the emergence of DSL, cable, and fiber optic Internet communications, anyone can publish Windows applications and web-enable them to share legacy resources across their internal LAN or throughout the world via the web. **RDS-Tools** provides the easiest-to-use and most cost-effective tools available to assist you in this task.

After years of investment in R&D, the **RDS-Tools** Development Team is proud to offer four brand new technologies which will revolutionize your Remote Desktop and Terminal Services usage. With **RDS-Tools**, you possess the best and easy-to-use solutions to efficiently deploy the ever-increasing power of today's Microsoft Windows systems.

RDS-Tools provides the "Must Have" Microsoft Windows system companion toolbox: Discover 3 Remote Desktop server-based products to ease the access and the security of your Windows servers.

RDS-WebAccess

Access your applications on your favorite web browser,
from any device

With the emergence of DSL, cable, and fiber optic Internet communications, anyone can publish Windows applications and web-enable them to share legacy resources across their internal LAN or throughout the world via the web. Also, with the powerful rise of BYOD and remote working, it becomes mandatory to access your Remote Desktop from any device (Laptop, Chromebook, IPAD, Macbook, Surface...).

The easy-to use AdminTool

RDS-Tools provides the easiest-to-use and most cost-effective tool available to assist you in this task. With **RDS-WebAccess**, you can run any Windows applications that simply don't exist on any app stores on your tablets. This is the most cost-effective and easy-to-use HTML5 solution to access your applications from everywhere and from any device.

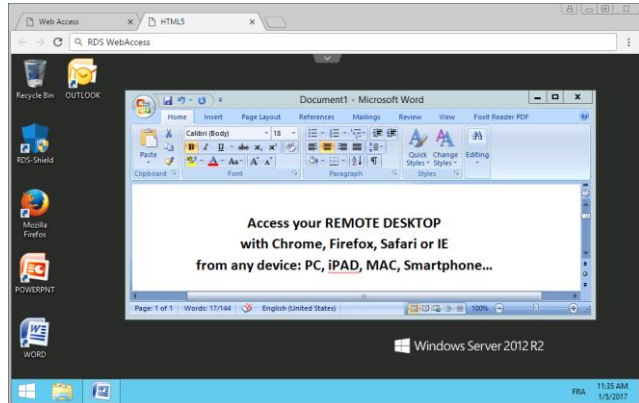

RDS-WebAccess allows you to access your PC or your RDS/TSE server to open your Desktop from anywhere in the world, using the device of your preference. Users will have a full Remote Desktop Experience by listening to the sound that plays on the remote machine in real-time, exchanging files between the remote machine and the portable device and even printing from the remote host to the local device.

Convert any web browser into a Remote Desktop client

RDS-WebAccess is a **clientless remote desktop solution**. We call it *clientless* because no plugin or client software are required.

RDS-WebAccess is a pure web solution and does not require Flash, Java, ActiveX, Silverlight or any other setup on the end-user side. Once this software is installed on your PC or RDS server, all you need to access your desktop is a web browser.

Solution for the Bring-Your-Own-Device era

Embrace BYOD – minimize IT hassles and help desk support load. Take advantage of **RDS-WebAccess** features and secure, anywhere, any device connectivity and access-management solutions.

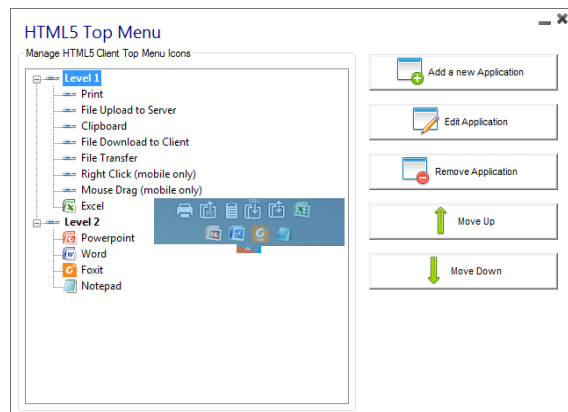

With **RDS-WebAccess**, you will leverage the advanced features of HTML5 to quickly and easily turn any HTML5-compatible browser or device into an enhanced RDP Client. Instantly connect to Windows desktops and applications, from iPad, iPhone, Android devices, computers running Windows, Mac OS X, Linux, Chrome OS, and even from locked-down work stations – without installing Flash, Java or any other software on the end-user device. That means zero client maintenance !

Access and manage your applications with the HTML5 Top Menu

With **RDS-WebAccess** HTML5 top menu, add, edit or remove applications which will appear at the top of your webpage.

Easily share files from your Remote Desktop to the Server and vice-versa.

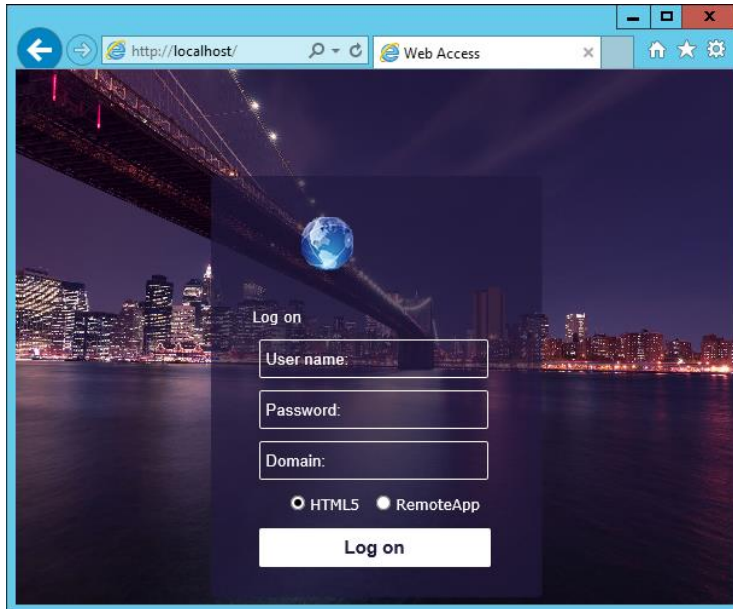

Easily print from a remote location thanks to the Universal Printer.

Fully secured and customizable Web Portal

The Web Access Portal provides a secure, managed and accelerated access from local and any remote servers location, to text or graphics-rich Windows applications and to Windows desktops.

You can easily **customize** it with different themes, various background images, your own images or logos... Access it **securely**, thanks to SSL encryptions. Use any device such as your Chromebook, Android tablet, iPad, iPhone or smartphone to connect to your PC or your remote computers from anywhere and you will have access to all programs, documents, files, and network resources as if you were in front of the host PC.

All you need is an HTML5 compatible browser.

RDS-WebAccess grants access to your desktop running on Remote Desktop Services (Windows Terminal Services and/or Remote Desktop Services on PCs).

RDS-WebAccess features in a nutshell

- Full web remote desktop
- Convert any web browser into a Remote Desktop client
- HTML5 technology
- Advanced file transfer and drag-and-drop support
- Universal Printing
- Built-in java based webserver (unlimited number of users)

RDS-WebAccess is compatible with Windows Server 2003, Windows Server 2008/2008 R2 and Windows Server 2012/ 2012 R2 (32 and 64 bits).

Try it now! **RDS-WebAccess** is the most cost-effective and easy-to-use solution to remotely connect to your server from any device, including mobiles, tablets and computers.

RDS-Knight

The right weapon against cyber-criminals

Most organizations assume that the hackers who threaten them will be motivated by the value of the information the company uses to provide its services. The truth is that cyber criminals don't necessarily care about the value of corporate, personal and/or financial data. Many attacks are perpetrated on systems because there's value in the processing power of the systems themselves.

As Windows infrastructures grow and evolve, it gets more and more difficult for security experts to see all the endpoints in their architecture. And you need to know your Remote Desktop vulnerabilities to mitigate your risk.

RDS-Knight approach combines advanced technology, the latest lessons and insights our elite team of Remote Desktop cyber security specialists bring back from real-world missions.

RDS-Knight is available in two editions:

RDS-Knight Security Essentials is the best package to keep your Remote Desktop connection safe, with powerful protection features. It is the low-cost security solution you can even apply to all W7/W10 Pro RDP accesses.

RDS-Knight Ultimate Protection is the security tool every Windows Server administrator "Must Have": it provides all that you need to effectively protect your users' environments and prohibit malicious actions.

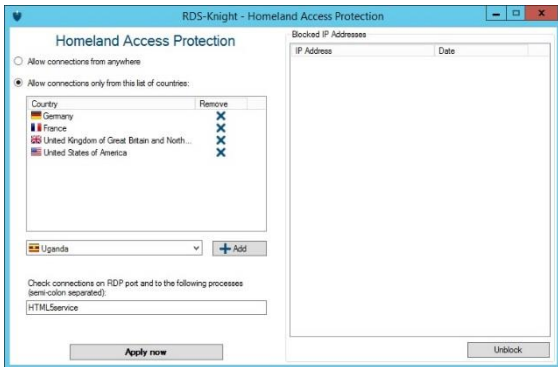

RDS-Knight is the easiest-to-use solution to secure the Users Remote Desktop environment.

RDS-Knight provides 5 major protections

Geo-Restriction for RDP

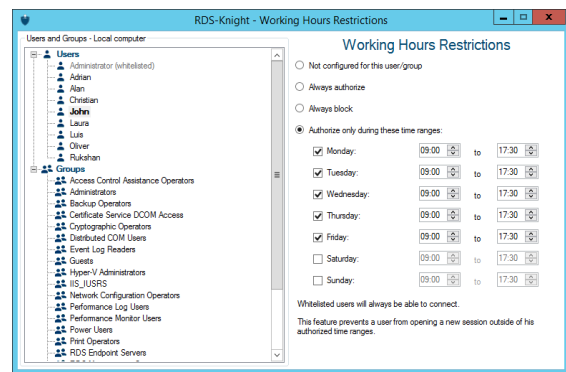

This feature is included in RDS-Knight Security Essentials.

Your users are located in Germany, France, Italy and USA offices. **Why anyone should be able to open a session from China, India or Iran?**

In a snap with **RDS-Knight**, protect your RDS servers from any hackers trying to open a session from foreign countries. This is extremely simple and so powerful. Just do it!

Protect your servers at night

Of course, your users should be free to connect and to work when they are at their desks. However, why would they be allowed to open a session at midnight? With **RDS-Knight**, you can specify the working time of the day when each of your user or group are allowed to open sessions. More, you will be able to specify their time zone and that could be important for your office in UK! It is then easy and amazingly nice to enhance your security policies.

This feature is included in RDS-Knight Security Essentials.

Block brute-force attacks

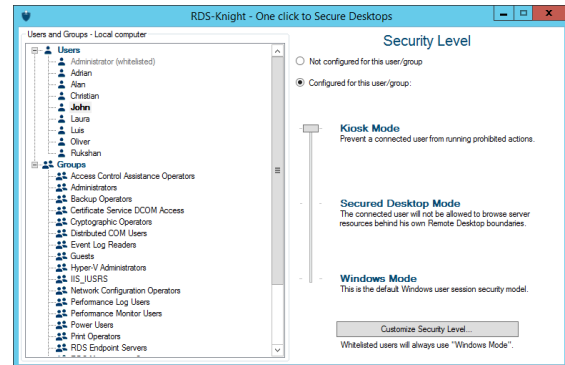

This feature is included in RDS-Knight Security Essentials.

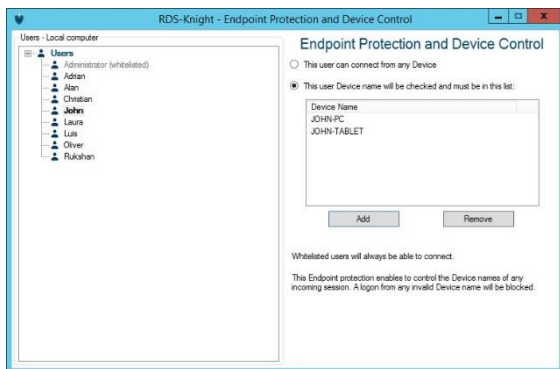

If your Windows server is publicly available on Internet, then there is a 100% probability that hackers, **network scanners and brute-force robots** are trying to guess your Administrator login and password, while you are reading this. Not only this is **bad for your server's security**, but it can also **consume a lot of its resources!** Stop the constant attacks right now with **RDS-Knight** brute-force attacks defender. It **will instantly protect your server** by monitoring Windows failed login attempts and automatically blacklist the offending IP addresses after several failures. Moreover, you can of course configure it to match your needs.

One Click to Set User Rights Policies

Windows systems are providing too many features and only few experts are able to properly manage this kind of complexity. Most of us are not skilled enough to set up security rules and to hide Windows features from users' Remote Desktops. Like a dream, **RDS-Knight will enforce for you the security level you want** on your RDS server. And the best is that you can do it **"user per user", or per group**. As soon as you apply it, even connected users benefit from a secured profile environment.

Endpoint Protection and Device Control

In this **BYOD** era, where technology allow users to connect and work with their own device, you need to be sure that every device can be controlled and kept safe. Thanks to **RDS-Knight**, you can either chose to allow your user to use any device, or just **allow him/her an access with a specific device** by entering its name. It then will be checked by the endpoint protection and a logon from any invalid device will therefore be blocked.

RDS-Knight features in a nutshell

- Prevent foreigners to open a session.
- Prevent users to connect at night.
- Avoid brute-force attacks.
- Protect users profile.
- Prohibit connection from non-authorized device.

RDS-Knight is compatible with **Windows Server 2008 / 2008 R2, Windows Server 2012 / 2012 R2** and **Windows Server 2016**. (64 bit editions).

Try it now! **RDS-Knight** will be your secret weapon. Easy-to-use, it will fullfill your expectations to protect your RDS servers against hackers.

Server Genius

Monitoring your servers has never been so easy!

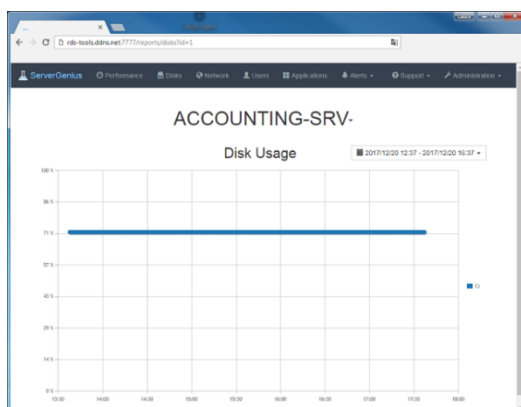

Start using Server **Genius** today and save your company money by monitoring applications licensed "by users" and detecting over-licensed applications or even unused software! **Server Genius** is the tool you need to optimize your software resources and to reduce unnecessary costs. It also helps you discovering quick-wins such as moving some users to an under-used server, and planning on the long-term your IT infrastructure evolution.

Install it in 30 seconds on your server and get a clear understanding of your servers' usage and performance. Monitor multiple servers on one interface!

Without the ability to monitor user activity in real-time, companies will continue to suffer from undetected user-based threats for extended periods of time. **Server Genius performance and applications analytics instantly alert IT teams to abnormal or suspicious users activity.** **Server Genius** gives you facts and data about your servers usage (CPU, Memory, I/O, Disks), applications usage and users on Remote Desktop Services. The Web interface allows you to get a complete overview of your servers' activity even from your tablet or mobile phone!

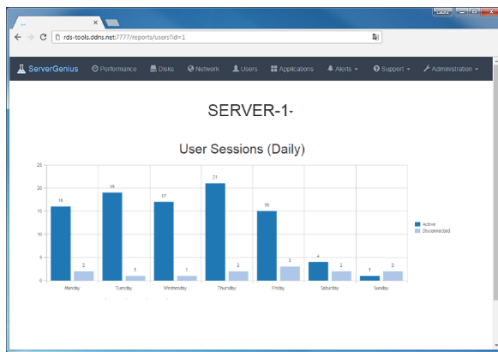

Monitor the applications usage by *duration of use, by users and per server*

The disk usage reports display **the disk's used space per server**

The performance Report displays your **CPU & memory usage per server**

Track **users' data** on the Web Interface

Server	Threshold	Action	Manage
ADMIN-PC	CPU > 85% for at least 3 minutes	Send email to sys-admin@your-company.com	Remove
ADMIN-PC	Memory > 80% for at least 5 minutes	Send email to sys-admin@your-company.com	Remove
SERVER-1	Disk Used Space > 75% for at least 60 minutes	Send email to sys-admin@your-company.com	Remove
SERVER-2	Active Users > 20 for at least 5 minutes	Send email to sys-admin@your-company.com	Remove

Track changes, resources usage and events with **real-time email alerts**: don't wait for your users to complain!

Receive real-time alerts and troubleshoot important issues faster

The performance and usage analytics generated by **Server Genius** allow alerts to be based on chosen events that occur during a date-range. These alerts generate emails console for **immediate awareness of the Administrator**. Access the reports **anywhere anytime** with our user-friendly web application.

- Customizable alerts: determine time-ranges and thresholds.
- Web interface fully compatible with tablets and Smartphone.

Server Genius features in a nutshell

Server Genius is a complete solution for identifying and managing user-based risks:

- Track and audit Remote Desktop accesses
- Monitor employee activity on Remote Desktop Servers
- Check whether remote users are actively working
- Monitor sessions running via RDP
- Check users' time spent on the system via the RDP
- Get real-time alerts and give immediate response to the threat

Server Genius is compatible with OSs from Windows XP to Windows Server 2012 / 2012 R2 (32 and 64 bits).

Start monitoring your Remote Desktop Services server today, try it now!
